PROFILE

I am a curiosity-driven Game Development student at Saxion University of Applied Sciences with a strong background in Gameplay programming using **C#/C++** and **Unity**. However, my **true passion** lies in **Graphics programming**. While I am still in the early stages of Graphics, I am **eager** to **deepen my knowledge** and pursue it as my **future career**.

As I continue expanding my Graphics programming portfolio, my strong foundation in 3D Mathematics and Programming allows me to focus on mastering rendering techniques more efficiently.

COURSEWORK & SKILLS

First Year Sep 2023 - Jul 2024

 Learned how to apply my C# knowledge to gameplay, physics and algorithms programming by utilizing a custom-made 2D game engine by the teachers.

- Developed my first fully functional <u>Unity 3D Game</u>, applying various **Software Architecture** techniques to ensure maintainability and scalability.
- Completed supplementary courses covering Game and UI/UX design, as well as professional skills like Communication and Research.

Second Year

Sep 2024 - Jul 2025 (Expected)

- Pursued advanced coursework in Graphics programming, with a focus on 3D Mathematics,
 C++, and 3D Rendering using OpenGL.
- Familiarized myself with more **Software Architecture** techniques, by applying **SOLID principles** and various **design patterns** while developing a <u>Unity 3D Tower Defense game</u>.

Group Projects

- Collaborated on multiple **group projects** (2-3 weeks), working closely with **Engineers**, **Designers**, and **Artists** to develop **unique games**.
- Effective communication and strong teamwork allowed us to navigate challenges in a fastpaced development cycle and successfully achieve our goals.

TECHNICAL SKILLS

- Programming Languages: C#, C++, OpenGL (GLSL)
- Tools: Unity, SFML, GXPEngine (developed by teachers), Git, Visual Studio
- Additional Technologies: Figma, Tiled, Java, HTML, CSS (SASS), JavaScript (jQuery), MS SQL, ASP.NET Core MVC, Elixir, Erlang

PROJECTS & EXPERIENCE

3D Rendering with OpenGL

Nov 2024 - Present

- Independently studying **OpenGL** to expand my knowledge of real-time rendering.
- Thoroughly worked through the first two chapters of the '<u>LearnOpenGL</u>' book, focusing on Coordinate Spaces, Camera Behavior, and the Phong Lighting Model.
- Developed an interactive scene with Unity-style navigation, featuring real-time lighting from Directional, Point and Spot lights.

C++ Sep - Nov 2024

- Participated in a C++ course, exploring key concepts such as memory management through pointers and references, CONST-ness, OOP principles like constructors and destructors, File I/O.
- Designed and developed a <u>2D Battle Game</u> using the <u>SFML framework</u>, implementing game object hierarchy, scene setup by mapping JSON data into game objects, sprite animations, and persistent <u>high-score</u> tracking between sessions.
- Scored 10/10 on my final assessment.

3D Math Sep - Nov 2024

- Completed a **3D Mathematics** course based on the '3D Math Primer for Graphics and Game Development' book, covering **key topics** such as **Coordinate Systems** and **Matrix operations**.
- Found this course particularly intriguing due to its applied nature, allowing me to grasp realworld use cases intuitively and retain knowledge more effectively.
- Scored 9/10 on my final exam.

HellFryer - Unity 3D Split-Screen Co-op Game

Jan 2025

- Developed as part of a **3-week group project** with a **team of 6**, including Engineers, Designers, and Artists.
- Established a clear Git workflow and code architecture, ensuring maintainability using SOLID principles and design patterns.
- Responsible for implementing the co-op gameplay, role-switching mechanics, hunting equipment, monster behaviors, and part of the hostile items' interactions.
- Successfully managed project complexity, meeting all planned milestones within the deadline.
- Achieved a final project score of 9/10 due to strong teamwork, organization, and execution.

EDUCATION

Bachelor of Creative Media and Game Technologies

Sep 2023 - Jul 2027 (Expected)

Saxion University of Applied Sciences

Specialization: Game Engineer - Focus on Gameplay and Graphics programming

Mathematics and Computer Science

Sep 2018 - Jun 2023

High School of Mathematics "Dr. Petar Beron"

ADDITIONAL EXPERIENCE

Functional programming Software Development

Aug - Dec 2022

Internship at Quanterall Academy

• Erlang and Elixir software development

C# Web development

Feb 2021 - Nov 2022

Software University (SoftUni)

• C# with MS SQL and ASP.NET Core MVC framework software development.

LANGUAGES

English - C1 Bulgarian - Native
