Kaloyan Ivanov

Game Programmer

Profile

Curiosity-driven Game Programming student specializing in C#/Unity and C++/Unreal Engine, backed by professional mobile game industry experience and systems/tools development. Strong foundation in software architecture (SOLID, design patterns), low-level mathematics, and rendering. Experienced in mentoring peers and collaborating within multidisciplinary teams, seeking a graduation internship for early-to-mid 2027.

Profile

Experience

Saxion - Creative Media and Game Technologies — Enschede, Netherlands
Teaching Assistant (Part-time) — Sep 2026 - Present

- Mentor and guide **30+ students** in core programming modules, focusing on Programming Fundamentals (within Unity/C# contexts) and Software Architecture.
- Conduct **code reviews** emphasizing clean code, SOLID principles, and scalable design patterns.

Casualino JSC — Varna, Bulgaria
Unity Developer Intern — Feb 2026 - June 2026

- Served as the primary Unity Developer for a commercially released mobile puzzle game with **1,000+ downloads**, built in Unity (C#).
- Researched competitor mechanics and engineered robust core gameplay and player progression systems adhering to strict **clean coding practices**.
- Collaborated closely within a **6+ person** cross-functional team of game designers, UI/UX, QA, and project managers in an agile environment.

Key Projects

Unreal Engine 3D Platformer — Enschede, Netherlands
Systems / Tools Programmer — Sep 2026 - Present
(Steam Demo Release: Jan 2027)

- Leading the **architectural port** of a Unity 3D platformer prototype to Unreal Engine 5.
- Designing and developing **complex systems and tools**, including dynamic camera transition systems, robust save-state architectures, and in-game testing/debug pipelines.
- Supervising blueprint and C++ **code structure** while continuously profiling and optimizing performance.

Procedural City Generation — Oct 2025 - Present
Personal Project

- Architected a **procedural generation pipeline** in Unity to recreate a small-scale city clone inspired by 1789 French Revolution Paris.
- Developed **custom editor tooling** and **modular mesh generation systems**, implementing Voronoi Diagram algorithm for neighborhood creation and shape grammar techniques for automated structural layouts.

Skills

- C#
- C++
- OpenGL (GLSL)
- Mobile Game Development
- Systems & Tools Development
- Engine & Graphics Architecture

Tools

- Unity
- Unreal Engine
- OpenGL
- SFML
- Git
- Git Fork Client
- Jira
- Visual Studio
- Rider
- Premake

Education

Bachelor of Creative Media and Game Technologies
Saxion University of Applied Sciences

Enschede, Netherlands
Sep 2023 - Jul 2027 (Expected)

- Specialization: **Game Engineer** - Focus on Game programming
- **Relevant modules:** Software Architecture, C# and Unity Development, C++, 3D Rendering and Mathematics

Languages

- English (C1)
- Bulgarian (Native)
